The following trees will be dug bare-root, balled and burlapped in a large ball of a peat mixture and wrapped with Polyethylene on the outside. This will allow the trees to be left standing on the open ground for long periods without watering. Trees balled this way will weigh about one-third as much as trees balled in earth.

We have experimented with balling trees in this way for several years and they have come through fully as well or better than trees balled in earth. They may be planted by merely taking the polyethylene wrapping off and planting the ball intact or by removing the complete ball and planting the tree bare-root.

For a regular earth ball with burlap, for trees priced at \$8.00 and under, there will be a \$1.00 additional charge and for trees priced at \$9.00 and over, there will be a \$2.00 additional charge.
